

Item P14-1439

Concealed Head Shutgun

Concealed Head Shutgun will shut off fully concealed sprinkler head models. The longer probe of this Shutgun was specifically engineered to be able to reach the opening of the water source which is recessed inside the body of the sprinkler head.

Shutgun shuts off activated fire sprinkler heads while keeping the system in-service. Fusible link will release if there is a fire; therefore the building is still protected. Helps prevent excessive water damage to buildings and contents. Offers one-handed activation means it is safe to use from a ladder. Shutgun is a must have tool for facility owner / managers to save time and money.
