**Item P16-0996**

**Proplex 250 FR**

Proplex 250 is an ultra lightweight protection board with a twin-wall construction for a strong, yet lightweight, solution to surface protection. Used in a variety of internal and external applications during building, construction, and refurbishment projects, the fluted polypropylene sheets can be cut, curved or creased to fit any surface. No warping when wet, unlike plywood, requires virtually no maintenance. Conforms to very tight curves and sharp angles, greatly reducing the need for cutting and taping. Can be paired with Hanger Pins for easy mounting and removal. 100% Recyclable and Flame Retardant.
