

Item P12-1397

Thermaflex® SLP Hose

S-LP-10 non-insulated Class 1 connector is designed for use in all pressure cooling and heating systems. It is used in either supply or return sections: for branch ducts and duct connections to or between mixing units, induction units, control or terminal units, and diffusion devices, including light troffers. Thermaflex S-LP-10 duct provides economical means for handling misalignment between system components and ducts around obstacles where fabricated and fitted ducts are difficult and costly to install.
